

Bacterius™ 5B, Dry Concentrated Beneficial Bacteria

Bacterius

#1 product for deep, yucky and smelly organic lake and pond sediment!

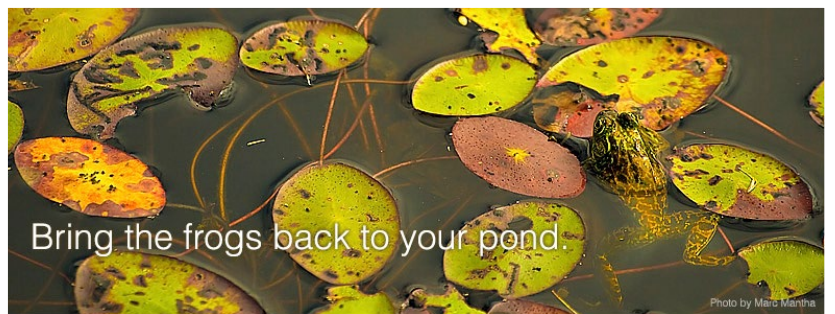

Bacterius™ 5B is a super concentrated beneficial natural bacteria with barley straw. 5 times more potent than Bacterius 1B!

Product Information and Technical Specifications

Bring the frogs back with Bacterius™ 5B!

Bacterius™ 5B consists of billions of microbial cultures specifically chosen to reduce dissolved organic carbon and organic sediments consisting of both cellulose and lignin components - dead and decaying algae and vegetation.

String algae will choke a pond. Use Bacterius™ 5B concentrated bacteria in your pond or lake for severe or persistent algae blooms, deep organic, nutrient rich sediment and unpleasant odour problems. Bacterius™ 5B acts quickly, hastening the process of organic decomposition when applied regularly and in the presence of lake bottom aeration. Effective against aquatic weeds such as Eurasian milfoil, Bacterius™ 5B is the answer. All of our beneficial bacteria are more effective in the presence of a lake bottom aeration system.

With 5 billion active cells per gram and pure pathogen-free cultures, Bacterius™ 5B is the strongest pond & lake bacteria available. No need for premixing, 5B is packaged in pre-measured, half pound water-soluble packets for easy dosing. Simply toss in the appropriate number of pouches into the pond or from the lake shoreline. As the 5B dissolves, it releases the beneficial bacteria into the water column, where they sink down and begin consuming the nutrient rich muck.

Bacterius™ 5B is an effective treatment to remove organic matter and restore water clarity. Bacterius™ 5B is effective for foul odour. This premium blend of natural bacterial cultures is an extra-strength pure bacterial mixture for accelerated treatment with no harsh chemicals.

Benefits of Bacterius 5B Dry Concentrated Bacteria

- Reduces and prevent the proliferation of algae.
- Improves water clarity in ponds and lakes.
- Reduces odours associated with anoxic conditions.
- Reduces lake bottom sludge and mucky pond sediments.
- Controls excess nutrients that contribute to algae growth.
- Enhances the aquatic environment and restores equilibrium to the ecosystem.

Weekly Dosage

Weekly dosage varies depending on the application, age of the pond, the fish and plant density and the amount of organic matter.

Dosage small ponds : 1 pouch / 340 m² (3660 ft²)
Dosage large ponds and lakes: 2 pouches / 680 m² (7320 ft²)
Conditions needed: +10 °C / 50° F, pH 5 – 9

Concentration 1B for pond water quality maintenance, 5B for severe or persistent water quality problems

Residential, Commercial, Industrial and Institutional Markets

Ponds, lakes and dugouts - Golf course ponds - Storm water, retention ponds - Stagnant waters - Marinas

10 lb box and 25 lb box - Call for pricing 705.789.6663
